

Arbutus Team Edition

The most advanced high performance audit analysis platform for the desktop.

Based on 25 years of software innovation excellence, Analyzer provides purpose-built data access and analysis capabilities uniquely mapped to the needs of today's audit teams

Already using data analysis software? Learn how Arbutus is compatible with your existing audit analysis tools. Switching is fast and easy.

Contact us today and get started with a free 45-day license of Arbutus Team Edition!

From the innovation leader in audit analytics, Arbutus Team Edition offers audit teams the most advanced high performance analysis platform for the desktop. It is for audit teams that want to base their data access and analysis on Arbutus's desktop technology. The Team edition can include any combination of Arbutus Analyzer and LegacyLink™. It can also be used with the Enterprise Edition to take advantage of Arbutus' server-based capabilities.

Key Advantages of Team Edition

- Easily share data and tests among your team using only your desktop
- Improve the efficiency and effectiveness of your audits by utilizing capabilities only found in Arbutus
- Integrate the use of audit analytics into Excel

Arbutus Analyzer

Analyzer is Arbutus flagship technology. It is based on 25 years of innovation and development guided by the requirements of our user community. Analyzer is a desktop technology with purpose-built data access and analysis capabilities that are uniquely mapped to the needs of today's audit teams. It offers auditors the shortest distance between the questions they want answered and the data that contains this critical information. Its inherent flexibility allows it to be easily adapted to the audit processes of virtually every organization.

Feature Rich Performance

- Data access: define and access any data source from relational databases to old, complex, legacy files
- No file size limit: analyze 100% of your data
- Ease of use: designed for auditors, Analyzer is the best interface between your objectives and the challenging data environment in which you operate
- Audit specific: commands and functions that enable all types of testing from simple to complex, performed in the least amount of time and generating the greatest confidence in your findings
- Data integrity: Arbutus is read-only so the integrity of your analysis is assured

Expand Your Capabilities

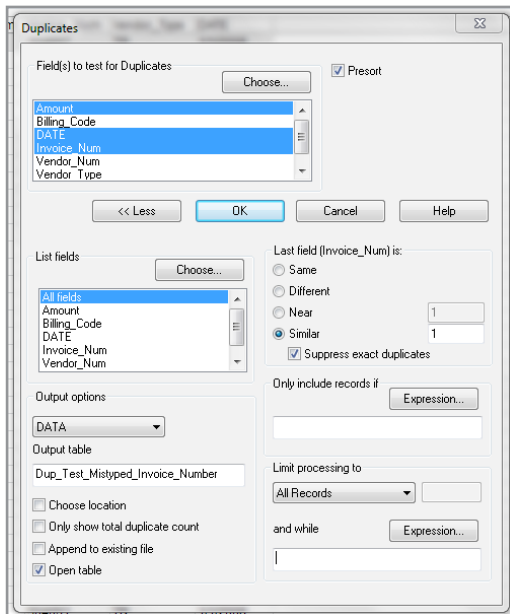

Analyzer enables you to:

- Easily collaborate your tests and data sources among your audit projects and within your local audit team

Drag and drop your audit tests and data sources into Team and Personal shared folders. Supports the ability to centrally control the set-up and administration of data definitions and audit tests for end-users

Arbutus Team Edition

- Expand your exception testing with capabilities only found in Arbutus
- Conduct fuzzy testing – expand current tests with a powerful set of fuzzy commands and functions

Just a few clicks to set up and run sophisticated duplicate tests like same, same, near and same, same, similar.

- Easily share data and tests among your team using only your desktop
- Improve the efficiency an effectiveness of your audits by utilizing capabilities only found in Arbutus
- Integrate the use of audit analytics into Excel

“Analyzer has become an integral piece of my department. I could not do my job without it!”
Matthew White,
 Senior Systems Auditor, HMSA

“I use Arbutus Analyzer every day at work, having multiple files open at the same time makes my analysis so much easier.”
Jean-Guy Pitre, CFE, CISA
 Wireless Express

- These helpful features can be utilized in all areas of the application, wherever your line of inquiry requires them. Some examples:
 - Get a Google-like result from your data, using Smart Search
 - Right click on a name and do a Quick filter/NEAR to find other similar names
 - Easily find similar addresses between Employees and Vendors
 - Just a few clicks will run a test that checks for payments with the same date, same amount and similar address
- Test controls and ensure compliance – with both ad hoc and automated tests
- Cleanse and normalize data for improved accuracy and findings.

Analyzer includes specific data normalization functions to improve the ease and sophistication of this important step in performing fuzzy analysis. For example, you can reference a substitution table of common address extensions and misspelling (street, road, raod, avenue etc.) and replace each occurrence with a set of standard values (ST, RD, AVE). This also simplifies the maintenance of this type of testing. With Arbutus, there’s no need to edit all your scripts/procedures each time you want to add another term – you simply add it to the substitution table
- Automate and standardize audit tests for improved efficiency

Arbutus’ capabilities to develop sophisticated scripts/procedures exceed those of any other audit specific application. For advanced users, the refinements and added features save time, eliminate workarounds and expand the type of analysis they can achieve. From improved dialogue boxes to strong procedure testing and debugging capabilities, Arbutus makes analysis automation significantly more effective and efficient
- Quickly identify data quality and integrity through specialized functions
- Do more - fastest performance of any audit analysis solution

Arbutus Team Edition

LegacyLink™

LegacyLink™ extends the reach and capabilities of Excel and other web or desktop reporting and analysis applications. It is most commonly used by auditors, managers, and other business users who:

- prefer to use Excel as their primary analysis and reporting tool.
- want to integrate Arbutus' best of breed analytics with their presentation and reporting dashboards

Any data source that is defined by Analyzer can be accessed using LegacyLink™. With LegacyLink™, Excel is not limited to the standard data sources that it can import; it can interact with the much broader data universe that Analyzer's Data Definition Wizard makes available. In addition, scripts or procedures that are created in Analyzer can be embedded into any Windows product, such as Excel spreadsheets. Imagine automatically reading and performing analysis on your mainframe data, just by opening a spreadsheet! Although it is a general analysis tool, LegacyLink™ enables Excel to be a far more effective, seamless part of your audit analytics program.

- LegacyLink™ can supply data to applications hosted on the web, server and desktop via ODBC, OLE/DB, .NET or JDBC
- Your data is secure as LegacyLink™ provides strictly "read only" access
